SOMASHEKHAR JAVOORU

Bengaluru, KA | somashekharjavooru@gmail.com | +918971941346 | LinkedIn | GitHub

Summary

Software Engineer and product builder with hands-on experience shipping end-to-end features across Flutter mobile apps, web, backend APIs, and SQL data layers. Proficient in Flutter, Dart, Python, and Java, with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Track record of debugging cross-layer issues (client, network, backend, data), designing complete UI/UX flows with loading, empty, error, and retry states, and writing unit tests. Use AI coding tools (Claude Code, Cursor) to iterate faster while reviewing and owning every line I ship. Care about user feedback and product details. Based in Bengaluru and comfortable working in office.

Education

Bapuji Institute of Engineering and Technology (Davanagere) *Aug 2022 – Jun 2026*
Bachelor of Engineering in Electronics and Communication | **CGPA: 8.75/10.0**
Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Networking

SPANDANA PU SCIENCE COLL, KULKARNIPET, ILKAL *Jun 2020 – May 2022*
Science | Karnataka Department of Pre-University Education | **86.6%**

Technical Skills

- **Languages:** Python, Dart, Java, C, C++, SQL, JavaScript
- **Mobile & Web Frameworks:** Flutter, Android Studio, State Management (BLoC/Provider), REST APIs, UI states (loading, empty, error, retry)
- **Backend & Data Layers:** Node.js / Express (Basics), SQLite, Relational Databases, SQL, HTTP/Networking, MQTT
- **Engineering & DevOps:** Git, Unit Testing, CI/CD, Client-Server Debugging, Root-Cause Analysis, Agile SDLC
- **AI & Tools:** Claude Code / Cursor AI (AI-assisted development), TensorFlow Lite, Machine Learning Pipelines, VS Code, Linux

Experience

Dextris Infoservices Pvt Ltd *Jun 2026 – Sep 2026*
Software Engineering Intern

- Designed and deployed an HTTP-based streaming backend subsystem using Python and C++, achieving a stable 30 FPS transmission rate across wireless networks for real-time user monitoring.
- Ran root-cause analysis and debugging across client and network layers, identifying integration bottlenecks to reduce application boot-up latency by 1.5 seconds (a 35% performance gain).
- Managed software delivery using Git and coordinated remote Over-The-Air (OTA) deployment pipelines, pushing 20+ updates to active devices.
- Built modular applications using Object-Oriented Programming (OOP) principles, optimizing execution algorithms to decrease software response time by 25% and reduce memory footprint by 15%.

EchoBrains *Jan 2026 – May 2026*
Software Intern

- Wrote optimized logic algorithms for time-critical features handling continuous data requests.
- Conducted unit testing with 90% code coverage on continuous data streams, verifying expected behavior prior to production handoff.

Projects

Farmer Assistant AI | *Flutter, Dart, Python, TensorFlow Lite, SQLite, REST APIs* *Aug 2026* | GitHub

- Built a cross-platform Flutter/Dart mobile app with an AI-powered conversational assistant that classifies and resolves 15+ distinct agricultural user intents.
- Translated product intent into complete user flows, building UI states (loading, empty, error, retry) and local fallback mechanisms so core app features keep working during backend API failures.
- Deployed an on-device classification pipeline using TensorFlow Lite (MobileNetV3), achieving 85.4% test accuracy and image inference in under 250 ms on lightweight Android devices.
- Developed the data layer in SQLite to track 50+ unique farm history metrics, crop-management records, and expenses, connecting the client to the local database.

Real-Time Face Recognition System | *C/C++, Python, HTTP, Networking* *Jun 2026* | GitHub

- Synchronized concurrent networking routines for HTTP data transmission to a centralized Python server, ensuring real-time monitoring with <200 ms processing latency across 3 concurrent node streams.
- Debugged memory leaks and network packet loss across the client-server bridge using systematic root-cause analysis, increasing continuous system uptime from 2 hours to 48+ hours.

EduNova Full-Stack Platform | *Web, REST APIs, SQL, Databases, UI/UX* *Oct 2025* | GitHub

- Developed a full-stack web marketplace for exploring and requesting technical projects, with a backend database schema that supported 100+ simulated active users.
- Implemented RESTful APIs to handle client requests, secure user authentication, and optimize data retrieval, reducing average network payload latency by 30%.

Certifications & Awards

- **Smart India Hackathon:** Built hardware-accelerated IoT and networking solutions with a 4-member cross-functional team.
- **Dextris Recognition:** Awarded for core contributions to software architecture, automated OTA deployment, and software bring-up.
- **HackerRank Java (Basic):** Certified in core programming concepts, data structures, and object-oriented logic.
